

Healthcare Messaging System

HMS is Global Mobility's flagship product that has been deployed in the majority of Singapore's public acute care hospitals. At its core, HMS provides real-time communication from the hospital to its staff, clinicians and even to patients. Its true value lies in the "Smarts" that operate above the communication layer, connecting the diverse grouping of people in a fluidly changing environment that is the hallmark of large public sector hospitals, automating workflows for critical communications, and reducing time-to-care for responding to a critical or abnormal result.

Key Features

1. ADID support
2. Directory Services
3. Electronic Roster Services
4. Healthcare Enterprise Messaging
5. Critical Result Routing & Notification
6. Broad Based Result Routing & Notification
7. Patient Communications
8. 2 way Patient Appointment Reminder System
