

HMS+

Secured Messaging for Healthcare

Global Mobility's latest innovation brings more capability right to the healthcare professional's fingertips. Available on major smart phone platforms, the application brings great utility to the care professional on the go.

HMS+ is developed to allow new features to be extended simply to the application with little impact on the existing functionality. This platform already integrates to the GML's HMS application, and the extensibility of the platform means that it can become the mobile extension of many other clinical systems in the hospital.

Key Features

1. Secured Messaging for healthcare enterprise
2. Total protection of confidential information
3. Health enterprise directory service
4. Electronic rosters services
5. Critical Result notification
6. Picture messaging, tangible patient context
7. Single device login by hospital ADID
8. Both mobile and web messaging for broadcasts and one to one messaging
9. SMS fallback capability for non-HMS+ users

”

The core HMS+ modules of the platform are the messaging, directory and electronic roster features. Add-on modules like Critical Result Notification, Patient History, Patient Appointment Reminder and Health Enterprise Intranet are already available, with more to be added in the near future.

Seamless integration of information available in the hospital directories can also be available on the HMS+ mobile client. From the interface, of HMS+, users can start communications with another user quickly and securely.

Rosters available in HMS are also made available on the mobile, as well as the user's own roster schedule for the month. Using the rosters, users can easily communicate to all people on the current day's roster with a single click.
